

Ms. Jackie Neice uses technology in a variety of ways in her classroom. Some of her regular classroom activities integrating technology include ...

- ✓ Streaming online videos for additional learning of a specific subject (especially science!!). These videos are played through her TV via computer output, allowing the entire class to view and comment.
- ✓ Recording “Good Morning McClellan” video announcements in her room each morning. These videos are placed on a shared network drive for everyone in the school to access and play the content.
- ✓ Using Powerpoint presentations to enhance lessons. These presentations can be viewed on her TV set via her computer.
- ✓ Using the computer lab at least twice a week for Accelerated Reader (which the students LOVE), Math games on the Internet, typing of projects, etc.
- ✓ Using the overhead projector and large screen for better visualization and classroom community involvement.

Ms. Neice continues with her efforts to discover new and innovative ways to utilize technology to augment instruction and learning.
